Lev Dorman, Cosmic Rays Research Center, Tel Aviv, Israel

Cosmic Rays in Magnetospheres of the Earth and other Planets

The monograph describes behavior of cosmic rays (CR) mostly in magnetosphere of the Earth's and concisely of some other planets. This problem became very important last time both theoretically because it closely connected with the Earth's Magnetosphere Physics (by CR may be checked different magnetospheric models) and practically (CR determined sufficient part of space weather effects on satellites and aircrafts). The book contains eight chapters, in which are considered history on CR geomagnetic effects discovery and its importance for determining of the nature of CR (energetic charged particles or gamma rays, see Chapter 1), the first explanations of geomagnetic effects in the frame of dipole approximation of the Earth's magnetic field (Chapter 2), trajectory computations of cutoff rigidities, transmittance functions, asymptotic directions, and acceptance cones in real geomagnetic field with taking into account higher harmonics (Chapter 3), CR latitude-longitude surveys on ships, trains, tracks, planes, balloons and satellites for determining real CR intensity planetary distribution and its changing with time (Chapters 4 and 5), geomagnetic time variations of CR caused by changing of internal sources of the main Earth's magnetic field and variable magnetospheric current systems (Chapter 6), models of the disturbed Earth's magnetosphere and their checking by galactic and solar CR (Chapter 7), behavior of CR in atmospheres and magnetospheres of Venus, Mars, and Jupiter (Chapter 8). The book ends with a list providing about one thousand full references, a discussion on future developments and unsolved problems, as well as Object index and Appendix. This book will be useful for experts and students in CR research, Solar-Terrestrial Physics, Magnetosphere Physics, and Space Physics.

2009. Approx. 600 p. Hardcover
Astrophysics and Space Science Library, Volume 358

► € 149.95 | £ 118.50 ► Conference price: € 119.96 | £ 94.80

ISBN: 978-1-4020-9238-1

Discount valid until 31.12.2008. This applies to personal orders by conference delegates using this order form.
